## **LATEX**

IFTEX is a document preparation system for the TEX type setting program. It offers programmable desktop publishing features and extensive facilities for automating most aspects of type setting and desktop publishing, including numbering and cross-referencing, tables and figures, page layout, bibliographies, and much more. IFTEX was originally written in 1984 by Leslie Lamport and has become the dominant method for using TEX; few people write in plain TEX anymore. The current version is IFTEX  $2\varepsilon$ .

$$E = mc^2 (1)$$

$$m = \frac{m_0}{\sqrt{1 - \frac{v^2}{c^2}}} \tag{2}$$
